### FUNCTIONAL DEPENDENCIES -

**1. Consider a relation R having attributes as R(ABCD), functional dependencies are given below:**

**AB→C, C→D, D→A**

**Identify the set of candidate keys possible in relation R. List all the set of prime and non prime attributes.**

**Sol.**

B is missing on the right-side of given functional dependencies , so it is sure that it will be the part of our candidate key so taking **Closures-**

B(+) - B (Not determines all the attributes so use it by combining with other attributes)

BA(+) - BACD

BC(+) - BCDA

BD(+) - BDAC

Candidate keys :- (BA,BC,BD) Prime

attributes are - A,B,C,D

Non-prime attributes are - 0

**NORMAL FORM: 3NF .**

**6. Debix Pvt Ltd needs to maintain database having dependent attributes ABCDEF. These attributes are functionally dependent on each other for which functionally dependency set F given as:  
{A  $\rightarrow$  BC, D  $\rightarrow$  E, BC  $\rightarrow$  D, A  $\rightarrow$  D}**

**Consider a universal relation R1(A, B, C, D, E, F) with functional dependency set F, also all attributes are simple and take atomic values only. Find the highest normal form along with the candidate keys with prime and non-prime attribute.**

**Sol.**

A and F are missing so they will be considered as a part of the candidate key.

AF(+) - AFBCDE

B(+) - B

A(+) - ABCDE (F is still missing)

Candidate key is := (AF)

Prime attributes are A,F.

Non-prime attributes are B,C,D,E

**NORMAL FORM: 1NF.**
